

Bit slot

$$10 \text{ Gbit/s} \rightarrow 10 \text{ GHz}$$

$$\rightarrow 10 \cdot 10^9 \frac{1}{s}$$

$$\rightarrow \frac{1}{10} \cdot 10^{-9} \text{ s} = \underline{\underline{0,1 \text{ ns}}}$$

Exercise B:

• B Log Q-Factor: 40 dB

Ex C:

Data Rate-Halt

→ set: N-division factor: 2

Bespuer Curves

3dB gain coefficient

Offset a von ~~-2,5~~ auf 0 → RZ 33%

gain verdoppelt

~~von~~

~~auf~~ -5 → 66%

~~delay~~ / ~~von~~ 0,25 / ~~nach~~ 0 / ~~AV~~

Pulse Curves

• Offset Voltage → set to 0 V → 33%

• gain (Am) from 2,5 to 5

• delay Squelch IT: I delay to 0,75 / 0,01 (ps)
→ broke 0,03 ns
